DOOR SEALING ASSEMBLY

ABSTRACT OF THE DISCLOSURE

The present invention is a door sealing assembly for sealing a vehicle door to a body. The door includes a frameless door glass and a mirror patch adjacent a front edge of the door glass. The assembly includes a first seal member that is adapted to be attached to the vehicle body and sealingly engages the mirror patch, and a second seal member that is adapted to be attached to the vehicle body and sealingly engages the door glass. A third seal member is adapted to be attached to the mirror patch and sealingly engages the door glass and the second seal member.
